

Lesson 1

Intro:

Learning Time (Time should be capitalized)

With Teacher Keri (Teacher should be capitalized)

Culture and Identity Change to “Personal Identity”

2nd Intro:

O’bilim Lesson 1 (Lesson should be capitalized)

1:14 Identity puzzle piece: does not need to be a puzzle piece (but it can be) But it should not be moving. Anytime there is text to read it should be still so it can be easily read.

1:45 Personal characteristics, puzzle piece is good, should not move though.

2:18 - 2:49 : background and text should not move, it distracts from reading

2:50: background and text should not move, it distracts from reading

3:01: pause for students to create their own sentence, show same sand timer as at 3:20

3:02: background and text should not move, it distracts from reading

3:20: add 1 or 2 more seconds to the time here

3:29 – 3:59: text and background should not move

5:28: Intrapersonal (delete “Intelligence”)

9:35: Here I imagined that the previous puzzle pieces would also be there and we are adding to them.

16:20: Here I imagined that the previous puzzle pieces would also be there and we are adding to them.

17:50: Malala is in white text on a white background. Maybe add a heavier drop shadow or something.

19:13: Here I think we should use the sand timer again for consistency. Also, I think we should add the questions on the sand timer slide for students to reflect on: What are the guiding

principles that influence your actions and decisions? How do they contribute to your identity?
Also this reflection part needs more time.

19:35: Here I imagined that the previous puzzle pieces would also be there and we are adding to them.

20:04: delete this transition.

21:15: delete the text here, show the equation instead. Highlight/bolden the parenthesis when I say we start with parenthesis.

21:20: Keep the equation at the top as you show the rest of the steps.

22:20: Delete this segment

22:23 delete the text here, show the equation instead. Highlight/bolden the parenthesis when I say we start with parenthesis.

22:32: Keep the equation at the top as you show the rest of the steps

$(1+6) \times 16 - 9$

$1+6=7$

$7 \times 16 - 9$

$7 \times 16 = 112$

$112 - 9 = 103$

23:41: delete the text here, show the equation instead. Highlight/bolden the parenthesis when I say we start with parenthesis.

24:50: text should stop scrolling and stand still for students to read each one. It can be displayed in two groups.

Lesson 2

Intro:

Learning Time (Time should be capitalized)

With Teacher Keri (Teacher should be capitalized)

Title to lesson: Culture and Identity (Identity should be capitalized)

"It's fun to learn"

00:45: text should stand still

2nd Intro:

O'bilim Lesson 2 (Lesson should be capitalized)

1:24 – 2:52: Text and background should stand still

10:14 – 10:32: Lips are out of synch

14:31 : add text next to me:

Why did you chose these elements?

How do they reflect you?

How do they reflect your culture

15:01 : Text and background should not move

15:06 : “this” goes with the next slide (audio is cut in wrong place)

15:13 : after “represents” give a short 1 second pause to illustrate the blank that should be filled in

15:32 : After “symbolizes” give a short 1 second pause to illustrate the blank that should be filled in

15:45 : After “the inclusion of” give a short 1 second pause to illustrate the blank that should be filled in

15:56 : After “signifies” ” give a short 1 second pause to illustrate the blank that should be filled in

17:06 : Show the mathematical signs for addition, subtraction, multiplication, division

17:52 : pause here for about 15 seconds for students to try to solve the equation on their own.

18:00 : Awkward lingering, cut just a split second sooner

18:23 : solutions were given but equations were not given. There is a chunk missing here

18:56 : keep the original equation at the top throughout all of the steps (same thing for each worked equation)

General Notes:

Should we keep all intros the same for consistency?
