

Level	Age Group	Subject	Topic of UOI	Themes	IB Phase	Strand	Concept	Skills	Learner	Central Idea	Lines of Inquiry	Conceptual Understanding	Strand	Subject-specific concepts	Skills	Learning outcomes
Level 1	K2	Trans	Friends and Family	Who we are	Phase 1	Social Studies: social organization and culture. Language: oral and written, Math: Numbers and patterns, data handling, PSPE:interactions, Art: Music and Drama	Form Function Reflection	Social Skills, Communication skills	Caring, Communicator, Open minded	Relationships contribute to shaping our identity	- Diversity of relationships (form) - Role and purpose of friends and families(Function) - How relationships influence who we become (Reflection)	- Sharing our ideas and imagination depend on the words we choose - Everyone has the right to speak and be listened to - What we already know helps us understand what we read - Wondering about text and asking questions helps us to understand the meaning Knowing about our families and cultures enables us to develop personal identity	Oral language: Listening, Speaking Written Language: Reading, Writing	pronouns, sentence structure	- reading (With prompting and support, ask and answer questions) - writing (Use a combination of drawing, dictating, and writing to compose response) - listening (Follow agreed-upon rules for discussions (e.g., listening to others and taking turns speaking about the topics and texts under discussion). - presenting Practise a range of personal and social skills to interact with their peers.	- Students can make sentences to ask who, why, where, when, how - Ask questions to gain information and respond to inquires - Use grammatical rules (full stop, capital letter, space between words) - Understanding of what a family is; how they may differ and be similar - Demonstrate understanding of the characteristics of healthy and unhealthy relationships - Identify people in their local community they trust
		Trans	Cycles	How the world works	Phase 1	Science: Earth science, Maths:measurement, number, Language: visual language and written language, Art: Music and visual art, PSPE: Interactions	causation change connection	Research Skills, Thinking skills	Inquirers, Thinkers	The Earth's natural cycles influence the activity of living things.	- Natural cycles (eg night and day, weather patterns, seasons) - The actions people take in response to Earth's natural cycles - Patterns of behaviour in living things related to Earth's natural cycles	The earth's natural cycles correlates with the activities of living things	Earth and Space	seasons, weather, cycles, sequences and patterns	- To Observe carefully in order to gather data - Use a variety of instruments and tools to measure data accurately - Make and test predictions - Interpret and evaluate data gathered in order to draw conclusions - Consider scientific models and applications of these models (including their limitations)	- To observe simple patterns in daily and seasonal cycles - To observe the features of the local environment that are affected by daily and seasonal cycles - Make weather prediction - Compare and make prediction the weather in the morning, before going home/at night - Share and describe the cycles like day and night and water cycle.
		Trans	Systems	How we organize ourselves	Phase 1	Social Studies: human systems, PSPE:Interactions, Art: drama, Math: number and data handling, Language: written- reading and writing	Function Connection Reflection	Social skills, Communication skills, Research Skills	Knowledgeable, Principled, Communicators	People organize themselves and create systems in order to achieve a common goal.	- Purpose of systems (Function) - Interactions within a system (Connection) - What makes an organization successful (Reflection)	People organize themselves and create systems in order to achieve a common goal.	Human Systems and Economic Activities Social Organization and Culture	Communications, co-operation, employment, Community, roles, interaction	- Formulate and ask questions about the past, the future, places and society - Use and analyse evidence from a variety of historical, geographical and societal sources - Orientate in relation to place and time - Identify roles, rights and responsibilities in society	The interconnectedness of human-made systems and communities The structure and function of organizations Explore the ways in which groups of people organize themselves, or are organized, through common systems or interests.
Level 2	K3	Trans	Stories	How we express ourselves	Phase 1	Language: reading and writing, Art: drama, Social studies: culture PSPE: identity, Math: pattern and function, sequencing	perspective Connection	Communication Skills, Thinking skills, Creative skills	Open minded, Reflective, Communicator	Stories contribute to our understanding of the world	- Stories can be communicated in many ways - Reflection of story elements help us understand the world around us. - Stories give us a message that enables us to make connections with our real life.	- People write to communicate. - People read to learn. - Reading Written language works differently from spoken language.	Written Language: Reading, Writing	interpretation, communication, characterization, expression	- reading - writing With prompting and support, describe the relationship between illustrations and the text in which they appear (e.g., what person, place, thing, or idea in the text an illustration depicts).	- Make connections between personal experiences and storybook characters and/or events - Use grammatical rules correctly when writing a story - Select appropriate word choice to express feelings/ideas
		Trans	Living and non living things	Sharing the planet	Phase 1	Science: Life science, Maths:measurement, number, Language: visual language and written language, Art: Music and visual art, PSPE: Interactions	Form Causation Responsibility	Research Skills, Thinking skills	Inquirers, Thinkers	People make choices that have an impact on living things	- Characteristics and needs of living things (function) - The impact of our choices on environments and living things (causation) - Responsibilities towards living things (responsibility)	People make choices that have an impact on living things.	Living things	Habitat, behavioural adaptations, interdependence, diversity	- Use scientific vocabulary to explain their observations and experiences - Make and test predictions - Research skills	- recognize the ways in which plants and animals have adapted over time - make links between different features of the environment and the specific needs of living things - assess the impact that changes in environmental conditions can have on living things - Reflect on self-assess his/her personal use of natural resources.(reuse, recycle)
		Trans	Play	Where we are in place and time	Phase 1	Social studies: continuity and change through time??? PSPE: active living or interactions? Maths: Shape and space	Function Change perspective	Self Management skills, Communication Skills, Research skills(Digital skills)	Risk-takers, Principled, Balanced	We use play to express our feelings and ideas and to learn.	- Communicating through play(Function) - Change in play pattern (Change) - Imaginative use of everyday materials (Perspective)	Students will practise applying rules and routines to work and play	social organization and culture, communication	Giving oral reports to small and large group, knowing and applying appropriate rules imagination fiction and non-fiction	- Imagination - experimentation - self-expression - appreciation develop confidence and skill in expressing themselves learn non-verbal communication through body language and facial expression	- Describe the learning and understandings developed through their exploration of play - Forms play can take - How we can tell something is real or imaginary - People change their ideas when they play - understand how can imagining help people understand what can people do with imagination to help them play and learn
Level 3	G1	Language	All About Me	Who we are	Phase 2	Language-oral and visual PSPE - Identity	Connection Perspective Reflection	Thinking skills: Acquisition of knowledge Social Skills: Respecting others Self Management Skills: Healthy lifestyle	Inquirers Risktakers	By knowing myself I can better connect with others	- Who am I and what do I like(this could include Personal abilities, interests daily habits & routines) - Similarities and differences between ourselves and others - How relationships contribute to self-concept	Spoken words connect us with others. People listen and speak to share thoughts and feelings. Individuals are unique and have personal qualities and abilities. Relationships require nurturing.	Oral language (listening and speaking)	Vocabulary	Listening Skills Speaking Skills Describe familiar people, places, things, and events and, with prompting and support, provide additional detail. Add drawings or other visual displays to descriptions as desired to provide additional detail. Speak audibly and express thoughts, feelings, and ideas clearly.	- use words to communicate needs and to express ideas - listen and respond to picture books, showing pleasure, and demonstrating their understanding through words - interact effectively with peers and adults - tell their own stories using words - Increase their awareness of their strengths and weaknesses. - Identify skills/personal qualities to develop - recognize that cooperating and respecting others contributes to the overall health of self and others.
		Science	Matter and Materials	How the world works	Phase 2	Science - Matter and Material	Form Change Responsibility	Thinking skills: Acquisition of knowledge, Comprehension Research skills: Observing, collecting, recording data	Inquirers Knowledgeable	Matter has certain states and properties that can change with processes.	- the different states of matter - how we can change matter - Change - Informed choice around material use and sustainability - Responsibility	Matter has properties that can be explored and changed for different purposes.	Materials and matter	density, changes of state, reversible and non reversible, properties of materials, gases, liquids, solids biodegradable , organic and inorganic matter	- describe the different states of matter - explain the changes of matter - explain the purpose of changing matter - explain the responsible use of material for sustainability reasons - Develop scientific skills such as observing, analyzing and drawing conclusions based on evidence	- Sort out things to solid, liquid and gas - Describe matter based on what they see, touch, feel, smell - Explain the procedure of changing matter by explaining steps of scientific method - Explain the responsible use of material - Apply understanding of properties of materials in order to match materials to purpose. - Explore Impact of organic and inorganic matter on environment - Be aware of how to change water into a solid, liquid and gas - Explain people's responsibility regarding the use of materials from the environment.

Level	Age Group	Subject	Topic of UOI	Themes	IB Phase	Strand	Concept	Skills	Learner	Central Idea	Lines of Inquiry	Conceptual Understanding	Strand	Subject-specific concepts	Skills	Learning outcomes
Level 4	G2	Social Science	Roles We Play	How we organize ourselves	Phase 2	Social Studies - social organization and culture	Function Connection Responsibility	Social Skills: Accepting Responsibility, Respecting others, Cooperating. Communication Skills: Listening, Presenting.	Openminded Principled Balanced	To function as part of a community people take on different roles and responsibilities.	- what are the different roles we play in our communities (Function) - what are our responsibilities in these roles (Responsibility) - how members of communities are inter-dependent (Connection)	People have different roles and skills to serve the community. Enhancing individual's skills and knowledge can improve the wellbeing of others in their communities	social organization and culture	community, roles, interaction	Identify roles and responsibilities in community opportunities to demonstrate active listening, sharing and taking turns in both small and large groups	- Develop the communication skills by interviewing the people who are working at school and their role. - Ask questions related to jobs they see in the school. - Identify different jobs in the community - Identify and to explain skills are needed - Identify tools used in specific jobs - Identify and explain how different roles help community develop an awareness that groups form for a variety of reasons and have a variety of purposes. Understand that people within communities have responsibilities to help them get along, to keep them safe, to allow people to work effectively with one another. Understand what makes a community unique
		Language	Communication	How we express ourselves	Phase 3	Language - oral and visual	Form Perspective	Social Skills: Respecting others, Cooperating. Communication Skills: Listening, Speaking, Non-verbal	Communicators Risktakers Openminded	People use different forms of expression to communicate their thoughts and feelings.	- different forms of communication (Form) - verbal and non-verbal communication (Form) - different ways in which we express our thoughts, feelings and ideas(Perspective)	Oral - The sounds of language are a symbolic way of representing ideas and objects. - Spoken words connect us with others Visual The sounds of spoken language can be represented visually. The pictures, images and symbols in our environment have meaning	Imagination, experimentation, self-expression, appreciation	Imagination, experimentation, self-expression, appreciation	Speaking Listening Writing	- Listen and respond to picture books, showing pleasure, and demonstrating their understanding through gestures, expression and/or words - Select and incorporate colours, shapes, symbols and images into visual presentations - Show curiosity and ask questions about pictures or text - understand the ways in which images and language interact to convey ideas and feelings demonstrate an understanding that print and illustrations combine to carry the message
		Science	Mysteries of the universe	Sharing the planet	Phase 3	Science - living things	Form Change Perspective	Research Skills: Collecting & organizing data Thinking skills: Acquisition of knowledge Self management skills: Informed choices	Caring Knowledgeable Reflective	Mysteries of the universe can be unraveled by human exploration.	- Celestial bodies in the universe - Space exploration is changing - Impact of space explorations on our daily lives	Technology has allowed for a greater understanding of the universe Scientists can test some of their theories about the universe by observing from Earth and by sending probes into space. Science often advances with the introduction of new technologies and solving technological problems often results in new scientific knowledge; new technologies often extend the current levels of scientific understanding and introduce new arenas of research.	Earth and Space.	technology, (solar) system, gravity, orbit, centripetal and centrifugal forces, theory of origin	Use scientific vocabulary to explain their observations and experiences Identify or generate a question or problem to be explored Plan and carry out systematic investigations, manipulating variables as necessary	- Describe particular technology people use to observe and explore space - Explain the impacts of space observation and exploration to human life - Demonstrates understanding of how condition and characteristics of the planet support the existence of life Understands essential ideas about the composition and structure of the universe and the Earth's place in it identify and describe products used in daily life developed as a result of space exploration justify the need for continued space exploration
Level 5	G3	Social Science	Change Through Time	Where we are in place and time	Phase 3	Social Studies - continuity and change through time	Change, perspective, reflection	Thinking skills: Comprehension, Application, Analysis Research Skills: Formulating questions	Inquirer Knowledgeable Reflective	Ancient civilization are unique and have paved the way for present societies	- Characteristics of civilizations and societies - Connections between past and present - Processes involved in collecting,analysing and validating evidence	Our ways of life reflect the existence of past civilizations	- Social organization and culture: the study of people, communities, cultures and societies - Continuity and change through time: the past its influences on the present and its implications for the future	continuity, civilization, artifacts, difference, heritage, interaction, culture, preservation, identity cause and consequences	Formulate and ask questions about the past, the future places and society Use and analyze evidence from a variety of historical, geographical and societal resources Orientate in relation to place and time	- Demonstrates knowledge of past civilizations - Makes connections between past civilizations and present day life - Describes ways to preserve and continue to value past civilizations identify the major civilizations to be studied (Chinese, Greek ,Indian, Egyptian etc) - Create timelines of each civilization studied. - Create graphic organizers to show the causes and effects of events in the various civilizations Examine the contributions of the civilizations identified to trade, language and literature, technology, arts, and medicine. .
		Language	Role Models	Who We Are	Phase 4	Language - Written	causation perspective reflection	Communication (reading, listening, writing, speaking and presenting) Self-management skills (planning and preparing the story)	Risk-taker and Communicator	Choices of role models reflect the beliefs and values of individuals and societies.	- What determines our beliefs and values - How and why role models are chosen - Influence of role models on our choices and actions	- What we already know enables us to understand what we read. (Reading) - When we write, the words we choose and how we choose to use them enable us to share our imaginings and ideas. (Writing)	Reading, Writing	Comprehension, Background Knowledge, Vocabulary, response to text, evaluation	Reading, Writing Research skills , critical thinking	- Discuss personality and behaviours of storybook characters, commenting on reasons why they may react in particular ways (Reading) - Discuss their own experiences and relate them to fiction and non-fiction texts (Reading) - Read and discuss myths and legends - Use a dictionary, a thesaurus, and word banks to extend their use of language. (Writing) - Use feedback from teachers and other students to improve their writing.(Writing) Understand difference between a belief, value and opinion Recognize that individuals can have a positive and negative influence on the feelings of others

Level	Age Group	Subject	Topic of UOI	Themes	IB Phase	Strand	Concept	Skills	Learner	Central Idea	Lines of Inquiry	Conceptual Understanding	Strand	Subject-specific concepts	Skills	Learning outcomes
Level 6	G4	Science	Simple Machine	How the world works	Phase 4	Science - Forces and Energy	Function Reflection Causation	Thinking (gain scientific facts), Research (using scientific method)	Inquirer Thinker	People apply their understandings of forces and energy to invent and create.	- Understanding forces and energy help inventors to create new inventions - Function - Inventions impact on people's lives - Reflection - Certain circumstances lead to the creation of important inventions - Causation	A: Understanding of energy and forces can be applied to support human progress. B: People use simple machine to solve problems. People invent to solve problems.	A: forces and energy; forms of energy (Potential: stored- mechanical energy , gravitational, chemical energy). Kinetic: radiant, sound, electrical, heat/thermal, motion); transformation and conservation of energy; and physics B: mechanics, physics, power, technological advances	A: forms, transformation and conservation of energy, physics, magnetism, forces B: mechanics, physics, power, technological advances	A: - Observe carefully in order to gather data about types of forces and energy. - Use scientific vocabulary about forces and energy to explain their observations and experiences - Identify or generate a question or problem to be explored - Interpret and evaluate data gathered in order to draw conclusions about the transformation of energy - observe carefully in order to gather data to find ways to save energy. - use a variety of instruments and tools to measure data accurately towards the transformation and usage of energy - plan and carry out systematic investigations, manipulating variables as necessary make and test predictions B: - observe carefully in order to gather data - use scientific vocabulary to explain their observations and experiences - generate a question or problem to be explored - plan and carry out systematic investigations and interviews - interpret and evaluate data gathered in order to draw conclusions describe steps in designing an experiment show scientific interest and curiosity demonstrate safe practices in using tools and materials and conducting investigations show increasing confidence as scientific problem solvers	difference between a belief, value and opinion? identify and describe different forms of energy demonstrate how energy can be stored and transformed from one form to another (forexample, storage of fat, batteries as a store of energy) assess renewable and sustainable energy sources (for example, wind, solar, water) examine ways in which the local community could be improved in relation to the conservation of energy.
		Social Science	Economic Activity	How we organize ourselves	Phase 4	Social Studies - Human systems and economic activities	Function, Connection, Reflection	Thinking (analysing how we manage supply and demand) and Research (Find out different strategies to influence the buyer's behaviour)	Risk-taker Thinker	The supply and demand of goods and services has led to the creation of economic activity.	- The role of people involved in economic activity - Managing supply and demands for goods and services - Strategies for economic activity	The supply and demand of goods and services has led to the creation of economic activity. Recognize that all families produce and consume goods and services.	Human system and economic activity	Roles, system, network, entrepreneurship, production, and cooperation.	Social skills, communication skills, and self-management skills	- Describes the interconnectedness of people involved in the economic activity - Manages supply and demands for their business - Applies business strategies for opening a business - Examine wants and needs and identify choices people make to satisfy wants and needs with limited resources
		Language	Narrative Text	How We Express Ourselves	Phase 5	Language - Written	Causation, Perspective, Change	Communication (writing biography) Self-management (managing their journal)	Reflective Principled	Language use reflects social and cultural contexts and it connects us with others	- Elements that influence language use (function) - How can language help you connect with other people? (function) - Interconnectedness between language, society and culture (perspective, connection) - Using language differently for different purposes (perspective, connection, function)	Stories that people want to read/write are built around themes to which they can make connections.	Writing	Culture, communication, comprehension, background knowledge, text language	Writing skills Communication skills Research skills Build comprehension skills through engagement with multiple forms of content Cultivate critical thinking skills through discussion of issues that are relevant to students' lived experiences	- Identify and describe elements of a story—setting, plot, character, theme - write for a range of purposes, both creative and informative, using different types of structures and styles according to the purpose of the writing - show awareness of different audiences and adapt writing appropriately - use a dictionary and thesaurus to check accuracy, broaden vocabulary and enrich their writing
Level 6	G4	Science	Biodiversity	Sharing the planet	Phase 5	Science - Life Science	Causation, Responsibility, Reflection	Research (find data) Thinking (analyse and suggest ideas)	Caring, Thinker, Reflective	Biodiversity relies on maintaining the interdependent balance of components within ecosystems.	- Ways in which ecosystems, biomes and environments are interdependent - How human interaction with the environment can affect the balance of systems - The consequences of imbalance within ecosystems	Biodiversity relies on maintaining the interdependent balance of components within ecosystems.	living things, force and energy	Living things: biodiversity, biology, classification, conservation, ecosystem, genetics, balance, food chain, food web Force and energy: energy transferred in trophic level	- Observe carefully in order to gather data (students examine living and nonliving component in an ecosystem; record observations in a systematic way). - Use scientific vocabulary to explain their observations and experiences (students talk about what is observed; describe simple features of objects and events; describe what is happening using an increasing scientific vocabulary; record and present findings and conclusions using a variety of strategies and appropriate scientific vocabulary). - Consider scientific models and applications of these models (including their limitations) (students represent findings using pictures and models; reflect on and build upon their own current scientific theories and applications; apply scientific knowledge to reconstruct or refine their understandings of the biological worlds).	- Describe ways in which ecosystems, biomes and environments are interdependent - Explain how human interaction with the environment can affect the balance of systems - Justify the impacts/consequences of imbalance within ecosystems. - Identify the fundamental structure and function of an ecosystem - What are the roles of the water and food cycles in an ecosystem?
		Social Science	Human Migration	Where we are in place and time	Phase 5	Social Studies - human and natural environments and resources.	Change, Perspective, Causation	Social Research Skills	Risk-taker Open-minded	Human migration is a response to challenges, risks and opportunities.	- The reasons why people migrate - Migration throughout history - Effects of migration on communities, cultures and individuals	Migration is a response to human circumstances and challenges. Migration has both positive and negative impacts on the destination country.	Continuity and change through time Human and natural environments	Population, settlements, diversity, migration, adaptation	- Formulate and ask questions about the past, the future, places and society - Use and analyse evidence from a variety of historical, geographical and societal sources - Orientation in relation to place and time analyze information by sequencing, categorizing, identifying cause-and-effect relationships, comparing, contrasting, finding the main idea, summarizing, making generalizations and predictions, and drawing inferences and conclusions organize and interpret information from outlines, reports, databases, and visuals, including graphs, charts, timelines, and maps	- Identifies different reasons people migrate. - Explains the effects of migration on individuals and communities - Analyzes various ways people adapt to migration - identify and explain the geographic factors responsible for patterns of population in places and regions - Examine the challenge for immigrants who are assimilating to a new culture while maintaining their cultural identity - Understand the push and pull factors of migration - Understand illegal migration and human trafficking
		Science	Biodiversity	Sharing the planet	Phase 5	Science - Life Science	Causation, Responsibility, Reflection	Research (find data) Thinking (analyse and suggest ideas)	Caring, Thinker, Reflective	Biodiversity relies on maintaining the interdependent balance of components within ecosystems.	- Ways in which ecosystems, biomes and environments are interdependent - How human interaction with the environment can affect the balance of systems - The consequences of imbalance within ecosystems	Biodiversity relies on maintaining the interdependent balance of components within ecosystems.	living things, force and energy	Living things: biodiversity, biology, classification, conservation, ecosystem, genetics, balance, food chain, food web Force and energy: energy transferred in trophic level	- Observe carefully in order to gather data (students examine living and nonliving component in an ecosystem; record observations in a systematic way). - Use scientific vocabulary to explain their observations and experiences (students talk about what is observed; describe simple features of objects and events; describe what is happening using an increasing scientific vocabulary; record and present findings and conclusions using a variety of strategies and appropriate scientific vocabulary). - Consider scientific models and applications of these models (including their limitations) (students represent findings using pictures and models; reflect on and build upon their own current scientific theories and applications; apply scientific knowledge to reconstruct or refine their understandings of the biological worlds).	- Describe ways in which ecosystems, biomes and environments are interdependent - Explain how human interaction with the environment can affect the balance of systems - Justify the impacts/consequences of imbalance within ecosystems. - Identify the fundamental structure and function of an ecosystem - What are the roles of the water and food cycles in an ecosystem?
