

Production review: Lessons 1 and 2

After the video team delivered the first cuts, I reviewed every minute and returned timestamped notes. Most notes weren't about polish: they applied learning-design principles so the videos would teach better.

21 notes, lightly condensed from the original

2 lessons reviewed

Reviewer Keri Zeller, curriculum lead and presenter

What the notes were about

5

Readability

Text stays still so students can read it

5

Thinking time

Pauses long enough for students to think and respond

3

Continuity

Visuals build on each other across the lesson

2

Consistency

The same cues mean the same thing every time

6

Accuracy

Language, audio, and content are correct

Lesson 1: Personal Identity

11 notes

Intro	● Accuracy	Capitalize "Time" in Learning Time and "Teacher" in With Teacher Keri; retile the lesson "Personal Identity."
1:14	● Readability	The identity puzzle piece should not move. Anytime there is text to read, it should be still.
2:18–3:59	● Readability	Several segments: background and text should not move, as it distracts from reading.
3:01	● Thinking time	Pause for students to create their own sentence; show the same sand timer used at 3:20.
3:20	● Thinking time	Add 1–2 more seconds to the timer.
5:28	● Accuracy	Use "Intrapersonal" (delete "Intelligence").
9:35, 16:20, 19:35	● Continuity	Keep the previous puzzle pieces on screen so students see the puzzle growing.
17:50	● Readability	"Malala" is white text on a white background; add a heavier drop shadow.
19:13	● Consistency	Use the sand timer again, add the reflection questions on screen, and give this reflection more time.
21:15–23:41	● Continuity	Show the equation instead of text, bold the parentheses when I mention them, and keep the original equation at the top through every step.
24:50	● Readability	Text should stop scrolling so students can read each item; display it in two groups.

Lesson 2: Culture and Identity

10 notes

1:24–2:52	● Readability	Text and background should stand still.
10:14–10:32	● Accuracy	Lips are out of sync with the audio.
14:31	● Thinking time	Add the reflection questions next to me: Why did you choose these elements? How do they reflect you and your culture?
15:06	● Accuracy	Audio is cut in the wrong place: "this" belongs with the next slide.
15:13–15:56	● Thinking time	After each sentence stem, add a 1-second pause so students can see the blank to fill in.
17:06	● Accuracy	Show the symbols for addition, subtraction, multiplication, and division.
17:52	● Thinking time	Pause about 15 seconds so students can try the equation on their own.
18:23	● Accuracy	Solutions appear but the equations don't; a section is missing.
18:56	● Continuity	Keep the original equation at the top throughout every worked example.
General	● Consistency	Keep all lesson intros the same for consistency.

What this review shows: on video, small production choices decide whether students can learn. Moving text splits attention, short pauses skip the thinking, and disappearing visuals make students hold everything in memory. Catching these in review is part of instructional design, not an afterthought.
